The following list includes the 2217 species of insects known from Ojibway Prairie (Windsor, Ontario, Canada) as of 31 January 2008, with families arranged alphabetically within each order, genera arranged alphabetically within families, and species arranged alphabetically within genera. Of the 2217 species, 2210 were recorded during the current study and 7 were recorded by Hamilton (1994, 1995) but not collected during the current study. Odonata and Lepidoptera records are maintained on the [Ojibway Prairie website](#) and include visual records as well as recently collected specimens and records from earlier work (Pilkington 1974 - 1985; see text for further details).

While the current list of species from Ojibway Prairie is extensive, some taxa are conspicuously absent from the list. Certain groups were impractical to process or identify (e.g. some families of nematoceran Diptera, microlepidopterans, and parasitic Hymenoptera) while some entire orders were excluded either because they did not occur in our samples (e.g. Strepsiptera, Thysanura, Archaeognatha, Phthiraptera, Siphonaptera, Plecoptera) or were not effectively sampled and were therefore treated as outside the scope of the study (e.g., Collembola, Ephemeroptera, Thysanoptera, Trichoptera). Some unidentified material still remains to be examined and individuals interested in material from the study, or looking for more information on the study, are encouraged to contact the authors through the [University of Guelph Insect Collection](#). All material from this study, with the exception of some Odonata and Lepidoptera maintained at the Ojibway Prairie Nature Centre, is deposited at the University of Guelph Insect Collection.

We were dependent on collaborating systematists for the identification of many of our specimens, and we gratefully acknowledge the following collaborators for their contributions – K.G.A. Hamilton (Auchenorrhyncha), H. Goulet (Symphyta and Carabidae), L. Masner (Proctotrupeoidea), O. Lonsdale (Diptera and Coleoptera), R.A. Anderson (Curculionidae), T. Romanokova (apiform Apoidea), J. Skevington (Pipunculidae), M. Parchami-Araghi (Oestroidea), J. Llyod (Lampyridae), J. Kits (Bombyliidae).
