Hello everyone,

Here are some updates regarding the 2012 Peter Yodzis Colloquium.

The poster deadline has been extended to 30 May. See details at http://yodziscolloquium.wordpress.com/2012-colloquium/yodzis-atornell-poster-session/

The final program is available at http://yodziscolloquium.wordpress.com/2012-colloquium/program/

The theme of the Colloquium, developed with financial assistance from the Ontario Ministries of Natural Resources and Agriculture, Food and Rural Affairs, is "Sustainability, Socio-ecological Complexity and Adaptive Management". The 2-day meeting will focus on the challenges of conservation of biodiversity in the Anthropocene, and the opportunities for science to interface with policy. Featured speakers from academic, government, non-government and resource industry sectors will share their experiences and insights regarding the roles of decision analysis and adaptive management for confronting and reducing uncertainty that threatens to undermine conservation efforts.

Please forward to colleagues that you think may be interested! Thank you very much for your assistance.

For the organizing committee, best regards,

Tom Nudds
Professor
Integrative Biology
