NUTRICOTE® 14-14-14
CONTROLLED RELEASE FERTILIZER

TYPE:

GUARANTEED MINIMUM ANALYSIS
Total Nitrogen (N)* ........................................................................................................................................ 7% Nitrate Nitrogen 7% Ammoniacal Nitrogen
Available Phosphoric Acid (P2O5)* ......................................................................................................................................... 54% Soluble Potash (K2O)* ......................................................................................................................................................... 14%

The nitrogen, phosphorous and potash materials in this product have been coated to provide 14% coated slow release nitrogen (N), 14% coated slow release available phosphoric acid (P2O5), and 14% coated slow release soluble potash (K2O).

DESCRIPTIONS:
Nutricote is a high quality compound fertilizer which gives precise and controlled release of the nutrients. The pliable and resilient coating, which is made of polyolefin type resin, talc and organic surfactants, allows the penetration of water and subsequent release of the nutrient into the soil. The duration of release is controlled by the amount and proportion of such coating material. In general, the release rate is directly proportional to the amount of nutrient and takes up to two to three times the amount of soil used. The release is based on the duration of Nitrogen release and is specified by “TYPE”.

PRODUCT TYPE:
Each type of product carries a number representing duration of release in days. Product Types 40, 70, 100, 140, 180, 270, and 360 represent respectively 80% of nitrogen contained in the product will be released uniformly over a period of approximately 40, 70, 100, 140, 180, 270 and 360 days at a constant temperature of 25°C.

TEMPERATURE AFFECTS THE RATE OF RELEASE:
The rate of release of Nutricote is modified by temperature; a higher release rate under higher temperatures coinciding with the plant’s rate of growth. Nitrogen release of Nutricote is not significantly affected by soil moisture, soil type, soil pH or microbial activity in the soil.

DIRECTIONS FOR USE:
Nutricote should be applied according to soil or growing media conditions and the specific nutrient requirements of the crop being grown. If the growing media is sandy, loamy, or clay, good drainage (Low Cation Exchange Capacity), a higher rate of the product should be used. For heavier, clay-type soils (High Cation Exchange Capacity), a lower rate of Nutricote should be used.

Light feeding crops: Rhododendrons, Azaleas, Ferns, Orchids, Bedding Plants, Forest Nursery Crops
Medium feeding crops: Nursery crops, cut Floral Crops
Heavy feeding crops: Most pot crops

ADDITIONAL NUTRIENTS REQUIREMENTS:
Nutricote provides nitrogen, phosphorus and potassium to the plant consistently over the release period specified. For plants which require a fast initial growth, additional fertilizers such as superphosphate, calcium nitrate and potassium nitrate may be incorporated in the mix prior to the incorporation of Nutricote. A source of calcium, magnesium and micronutrients must be added to the growing media deficient in these essential elements.

SOIL PASTEURIZATION:
Nutricote must be applied after the media is pasteurized by steam.

STORAGE OF GROWING MIXES:
Growing mixes which have Nutricote incorporated can be stored up to one month if temperatures are maintained below 10°C. Otherwise, mixes with Nutricote incorporated should be used immediately after mixing.

NOTICE:
Warranty of this product, either expressed or implied is limited to a guarantee of the composition as shown on the label in as much as laws are beyond the seller’s control. For the same reason, seller is not liable for any injury to living things, crops, soils or materials which may result from the use of this product.

CAUTION:
Harmful if swallowed. Keep out of reach of children. Store under cool, dry conditions.
