### Brief Description of Course:

This course is intended as an introduction to phenomenology. After a brief review of the historical context and early ‘phenomenologists’ that gave rise to and informed the birth of Husserlian phenomenology, we’ll examine several ‘introductions’ to phenomenology that attempt to describe and clarify its basic principles and methodology. We’ll then turn to particular authors and the phenomenological analyses of central issues in psychology, logic, ontology, epistemology, aesthetics, and metaphysics. Several graduate students who are actively engaged in phenomenological research will participate as guest lecturers throughout the course, introducing to the class those central phenomenological issues with which they are involved in their own current research.

### Required Texts:

All texts will be available online, on reserve in the library, or provided to the students by the instructor at cost. Readings will include selections from some of the following (as well as other texts):

Hegel: (Encyclopedia) *Logic*  
Whitehead: *Process and Reality*
