Brief Course Synopsis:

This course will examine the myriad relationships between climate change and social change through fiction (cli-fi) and non-fiction (creative, journalistic, pedagogical, scientific). No scientific background is expected of students, as the works studied will be geared to non-experts whose aim is to understand the main causes, effects, implications, and literary and cultural responses to the profound social changes that different societies around the world will be experiencing over the next several decades. We will also explore the emotional impact of climate change on individuals, particularly on young people facing life on a degraded planet where shortages of resources also mean greater inequality and the potential of increased violence. Our study of the social aspects of climate change will include the psychological experience of ‘environmental grief’ caused by a sense of loss that can paralyze people, thereby adding to human inertia and lack of concerted effort to mitigate the imminent and inevitable changes we face. Surprisingly perhaps, climate fiction is not always dystopian; many of the stories explore new and ancient perspectives on positive social change toward Earth justice.

Methods of Evaluation and Weight:

3 short response papers: (500 > 750 words): 10; 12; 15%

seminar presentation: 16%

quality of class participation: 10%

essay proposal (250 words): 12%

final essay (1500 words): 25%

Texts and/or Resources Required (e.g. Internet access, specific textbook title, lab kit, etc.)

Meyer, Bruce ed. *Canadian Tales of Climate Change* (2017)

Squarzoni, Philippe. *Climate Changed* (Graphic Novel)(2014)
