

Educational Technology Fair – Student Response Systems

hosted by

College of Biological Science

November 17th, 2016, 9:30 AM – 12:30 PM

• Science Complex Atrium •

Student Response Systems (sometimes called classroom response systems, personal response systems, student engagement systems, or audience response systems) are a set of hardware and software that facilitate teaching and learning activities in the classroom and beyond.

Who? Instructors from across the disciplines are invited to attend.

What? An informal opportunity for instructors to learn more about the various options for Student Response Systems.

Vendors have been invited to share best practices for using classroom response systems to promote student learning and engagement.

Why? We hope that instructors will leave with a better understanding of the options available in this area and some ideas around pedagogical best practices and implementation.

iClickers are an example of a Student Response System (SRS); however, with the ubiquity of mobile devices in the classroom, options have extended to include online applications that allow students to respond using their own devices.

Light Refreshments & Snacks Provided • Prize Giveaways!
