

## **Thank you to our donors.**

My name is Ingrid Jones I am heading into my 4th year of the nutritional nutraceutical science program and I was the recipient of the Isabella Anderson Conway scholarship this year. I appreciate this scholarship so much for helping ease the burden of the financial aspects of the University but also for the acknowledgement of my academic efforts and inspire me to continue those efforts.

My name is Jeff Lee and I've just completed my third-year studies in biomedical Sciences at the University of Guelph. I was the recipient of the Jessica Marie hammer third memorial scholarship this year and frankly I was really excited when I was told that I could actually send the video to you to express my gratitude for your help in supporting my academic journey.

My name is Anna Tran, and I am the recipient of the Kenneth James Berg memorial scholarship this past semester. I studied microbiology and I also minored in nutritional and nutraceuticals Sciences as well. I've learned and grown so much from my time at Guelph so far but of course there are still times where I question myself for my efforts an resuming the scholarship has really just reminded me that I not only love what I study but I'm also good at it.

Hello, my name is Sophia Mendoza and I recently graduated with that green marine and freshwater biology. As the recipient of the Precambrian aquatic prize, I would like to personally thank the donors Dr. Neil and Mrs. Barbara Hutchinson. This award has given me a huge confidence boost and has strongly motivated me to continue research work in the field of marine biology.

Hello Johnson and Johnson and the individuals behind the scenes that made this my reality. My name is Isaiah Burton. I'm now in fourth year studying biomedical science here at the University of Guelph and the recipients of the 2020 Johnson and Johnson diversity and inclusion scholarship in science. The scholarship has really helped me tremendously. As someone who's needed a part time job each semester to support myself, I can't tell you how much relief it gave me now that I can focus entirely on my academics my volunteering in my research.
