Many factors are taken into account during the planning and implementation phases when adding electronic access to the campus buildings. Please consider the following points:

- Building access is configured as a result of an assessment by the **Campus Community Police**.

- This assessment designates **main access doors** for primary building access which is managed by the campus Electronic Access system.

- Additional perimeter Electronic Access doors may exist, however they are **not** considered primary access points. These doors are generally offline and will be reserved for future use.

- **Security Is Not Convenience!**
  Access controlled doors exist to mitigate risk and they may not be presentable as an off-hours access point for staff, students or faculty.

- Internal department and corridor doors are also managed for safety of the University community and its facilities.
Departmental Electronic Access Contacts may be appointed during the design phase of the E.A. installation. These Authorized Departmental Contacts will assist in providing access as required.

- User access requirements are to be arranged with the specific department Electronic Access Contacts. Please follow this link to locate the appropriate Department Building Access Contact [1].

- **UofG Faculty, Staff and Students who require access to Electronic Access controlled areas are required to obtain and use the university issued I.D. card.**

- **UofG Faculty, Staff and Students Do Not qualify to be issued iClass FOB devices.**
