COURSE DESCRIPTION
This course examines psychosocial development in adolescence, emphasizing biological, cognitive, social, and emotional changes. LEARNING OBJECTIVES
Upon the successful completion of the course, you will be able to:
1. identify and explain the physical, cognitive, social, and emotional changes that occur during adolescence;
2. describe the major theoretical approaches;
3. expand conceptions of the range of developmental possibilities through awareness of local and global issues and the diversity of cultural practices, customs, and beliefs;
4. explore the practical implications of theory and research; and
5. actively reflect upon and communicate your own learning and the development of your understanding of adolescent development by writing regular reflection notes and written reports.
