

Participants Wanted!

We are interested in examining how our brain integrates visual information while walking

WHO?: We are looking for young (aged 18-30 years) adults.

WHERE?: University of Guelph, Animal Nutrition building (ANNU 273), or John T. Powell building (JTP 2237).

WHAT?: After we perform electronic screening ($^{\sim}15$ minutes), we will ask to meet over video call or phone to discuss our protocol in more detail, including our informed consent process, COVID-19 and general health screening questions ($^{\sim}15$ minutes). After this, we will ask you to attend 1 testing session of $^{\sim}2$ hours.

This project requires you to:

- o Bring your own shorts/t-shirt and walking shoes/sneakers to the testing session
- Have markers placed on your head, trunk, pelvis, feet, and legs. This will allow us to track your movements (only the markers will be visible to our cameras)
- Stand for approximately 45 minutes, with regular breaks, while stepping in place
- Walk bouts of 7 m or 23 feet at a time for a total distance of ~ 3 city blocks

There is no financial compensation available however, any costs related to parking will be reimbursed.

Identified information obtained in this study will be kept confidential at all times

This study has received clearance from the REB of the University of Guelph (REB #21-12-002)

If you are interested in participating, please contact:
