
Powered Pallet Truck Operator Training

EHS delivers this one hour session for new operators and for experienced authorized operators on a 3 year rotation. This session reviews the safe use of powered pallet lifting devices, including reviewing the hazards and controls, load security and device security.

The session needs to be followed by a practical skills assessment on the device used the unit, arranged by the manager in the unit and in consultation with EHS.

For more information on course timing, please contact the Manager, Agricultural & Veterinary Safety.
