Confined Space: means a fully or partially enclosed space,

- a) that is not both designed and constructed for continuous human occupancy, **and**
- b) in which atmospheric hazards may occur because of its construction, location or contents or because of work that is done in it

Atmospheric Hazards: mean,

- a) the accumulation of flammable, combustible or explosive agents,
- b) an oxygen content in the atmosphere that is less than 19.5 per cent or more than 23 per cent by volume, or
- c) the accumulation of atmospheric contaminants, including gases, vapours, fumes, dusts or mists, that could,
 - i. result in acute health effects that pose an immediate threat to life, or (ii) interfere with a person's ability to escape unaided from a confined space

Note: As per the definition of a confined space (above), the only class of hazard that determines its classification as a confined space is an atmospheric hazard; while other hazards such as electrical and mechanical hazards may be quite significant and will be identified and managed in a hazard assessment of the space, these hazards do not determine its classification as a confined space
