

The Roy C Anderson Memorial Lecture In Parasitology

College of Biological Science
University of Guelph, Guelph, Canada

Dr. Rolf M. Zinkernagel

1996 Nobel Laureate in Medicine/Physiology

Professor and Head

Institute of Experimental Immunology, Faculty of Medicine
University of Zurich, University Hospital, Zurich, Switzerland

“On Antiviral Immunity and Vaccines”

**Thursday, October 21st 2004
at 12.30 pm**

Peter Clark Hall, University Centre

Dr. Rolf Zinkernagel and Dr. Peter Doherty were jointly awarded the 1996 Nobel Prize for their discovery on how the immune system recognizes virus-infected cells. This significant contribution laid the foundation for an understanding of general mechanisms used by the cellular immune system to recognize both foreign organisms and the body's own molecules (major histocompatibility antigens).

All are invited to an informal reception for Professor R. Zinkernagel that will be held at 12 noon on October 21st, Peter Clark Hall, University Centre.

This annual lecture is open to students, faculty, staff and the general public. It is co-sponsored by the College of Biological Science, Mrs. P. Anderson, Roy's former students, and friends. More information on Dr. Zinkernagel's visit can be obtained from Dr. Patrick T.K. Woo [pwoo@uoguelph.ca].
