1 Course Details

1.1 Calendar Description

This course is an examination of common ecological circumstances faced by plants and animals and the morphological, behavioral and life history characteristics that have evolved in response. Particular emphasis will be placed on evolutionary processes and on adaptive aspects of thermoregulation, foraging strategies, spatial distribution, social and reproductive strategies. The course will emphasize both the theoretical basis and the empirical evidence for ecological adaptation.

Pre-Requisite(s): BIOL*2060, BIOL*2400

1.2 Course Description

- This course will not be a broad survey of the field, but will instead focus on a few subject areas that we will discuss in detail.
- Prerequisites: BIOL*2060 (Ecology) or BIOL*3110 (Population ecology – discontinued) or other Ecology course with instructor consent), BIOL*2400 (Evolution) or BIOL*3400 or ZOO*3300 (Evolution - discontinued).
- Students are expected to have some background and experience in statistics.

1.3 Timetable

- Lectures: 11:30 AM - 12:20 PM, Monday, Wednesday and Friday,
  - Location: MacKinnon - 031
- Labs
  - Tutorial Section 1: 12:30 - 1:30 PM, Fridays, SSC 1306 (Jan-Feb), SSC 2306 (Feb-April)
○ Tutorial Section 2: 1:30 - 2:30 PM, Fridays, SSC 1306 (Jan-Feb), SSC 2306 (Feb-April)
○ Tutorial Section 3: 2:30 - 3:30 PM, Fridays, SSC 1306 (Jan-Feb), SSC 2306 (Feb-April)

1.4 Final Exam

Exam time and location is subject to change. Please see WebAdvisor for the latest information.

2 Instructional Support

2.1 Instructional Support Team

Instructor: Beren Robinson
Email: berenrob@uoguelph.ca
Telephone: +1-519-824-4120 x58968
Office: SC1 2455
Office Hours: TBA or by appointment.

3 Learning Resources

• Lecture material will be drawn from the primary literature and supplied on the course website (via CourseLink).
• However, for background material, chapters in a number of books on evolutionary biology will be useful, such as these recommended below.

3.1 Required Resource(s)

CourseLink (Website)
https://courselink.uoguelph.ca
BIOL*4120 will make use of the UoG course website on D2L (via CourseLink) for supplying background and reading materials, lab materials, etc. Announcements of course news, deadlines etc, will also be displayed on the Biol*4120 CourseLink website. Please check it regularly.

3.2 Recommended Resource(s)

A Primer in Ecological Genetics (Readings)

Evolutionary Biology (Readings)
4 Learning Outcomes

By the end of this course, students should be able to address the following goals and perform the following skills.

4.1 Course Learning Outcomes

By the end of this course, you should be able to:

1. Evolution: Apply evolutionary principles to new problems in biology and everyday life; use evolutionary principles to develop novel hypotheses based on observation; explain a study to document selection-driven evolutionary change in a population.

2. Selection: Measure directional and nonlinear (stabilizing/disruptive) selection differentials; Define and understand how to measure selection gradients; Think critically about genic, individual and group selection; have a general sense of the strength of selection in the wild.

3. Fitness: Explain what fitness is and the variety of ways in which it can be measured; Appreciate challenges of measuring fitness in nature.

4. Heritability: Understand concepts of repeatability, heritability and polygenic inheritance at a more conceptual level; Understand at a basic level genetic covariances, genetic constraints and correlated responses to selection; Appreciate patterns in heritability estimates among types of traits.

5. Phenotypic evolution: Understand how to assess whether observed phenotypic changes/differences are genetically based.

6. Comparative method: Appreciate why it is important to consider evolutionary history in comparisons among species (and higher taxa), and have a basic idea of how this can be done.

7. Consider various other features of organisms such as phenotypic plasticity and life history traits in an evolutionary context, and explain using examples such concepts as evolutionary conflict between species, individuals and genes.

8. Quantify phenotypic variation in a sample in collaboration with others and use basic statistical methods to evaluate selection acting on the population (skills goal).

9. Practice effective critical thinking during written and oral communication in tutorial discussions focused on analysing primary scientific literature and creating a final
5 Teaching and Learning Activities

- This course has both lecture and tutorial components. The lecture period (Mon., Wed. and Fri.) will introduce and discuss theoretical concepts and specific methods in evolutionary ecology. The Friday lecture period will be used flexibly. In some weeks it will be used for additional lectures, while in other weeks it will be used for extended tutorials or project time.
- Tutorials will be used to apply concepts through practical exercises and the discussion, critique and presentations of the primary literature.

5.1 General Lecture Schedule

<table>
<thead>

6.2 Assessment Details

Assignment 1: Practical Lab (20%)
Date: Thu, Feb 1
Learning Outcome(s): 1,2,3,5,8,9
Course Content: Lectures & Readings
Assignment 2: Paper Oral Presentation & Discussion (20%)
   Date: Friday of weeks: 4-6, 8-12
   Learning Outcome(s): 1,2,3,4,5,6,7,9
   Course Content: Lectures & Readings

3 Questions Per Discussion Paper (2.5%)
   Date: Friday of weeks: 4-6, 8-12
   Learning Outcome(s): 1,2,3,4,5,6,7,9
   Course Content: Lectures & Readings

Assignment 3: Submission of complete draft 1 poster for Peer Review (5%)
   Date: Thu, Mar 15
   5% for the Peer Evaluation

Peer Review of Poster Draft 1 (5%)
   Date: Thu, Mar 22
   Learning Outcome(s): 9
   5% for Instructor evaluation of Peer Evaluation

Assignment 3: Scientific Poster Project (25%)
   Date: Thu, Apr 5
   Learning Outcome(s): 1,2,3,4,5,6,7,9
   Course Content: Lectures & Readings

   • Content 15%
   • Structure 10%

Instructor Evaluation

Final Exam (22.5%)
   Date: TBA
   Learning Outcome(s): 1,2,3,4,5,6,7,9
   Course Content: Lectures & Readings

6.3 In-Class Student Response System

   We will be using a student response system that meshes with smart phones, tablets and laptops called Kahoot! in class in order to poll class knowledge and to generate interactions with students. Of course, this should NOT preclude you from asking questions anytime during any lecture.

6.4 Assignments

   There are three assignments that occur over the term. Additional details and resources will be presented in class and available on the course website. Assignments are to be performed and reported as your individual work.

   • Assignment 1: Is a practical lab on quantifying phenotypic variation in a real
population and estimating selection on the phenotypic traits and writing a summary report (Friday labs in January). See instructions on CourseLink.

- **Assignment 2:** **Paper Oral Presentation and Discussion** in Friday’s lab sections:
  - You will sign into a student group to present an oral summary and help lead a discussion of one of the eight primary research papers in your tutorial section over the term. Students will form groups of 2-3 and sign up for either the summary or critique part of the oral presentation. Student groups will then split up and members from each presenting group will lead a discussion of the paper in a discussion group (2 per tutorial). Note that oral presentations are expected to meet a 4th year level of presentation! See instructions on CourseLink.
  - All students are also expected to participate in weekly paper discussions. Provide 3 written questions that you have about each paper read to the instructor in tutorial. Use your questions to help motivate discussion in your group. Submitting questions and participation in discussion gets you an easy 2.5% of your final grade.
  - Instructions and materials for paper analysis and presentation are on the course website and also available on the Dept. of Integrative Biology website at: https://www.uoguelph.ca/ib/academic-resources

- **Assignment 3:** Perform a review of the primary scientific literature in order to analyse a potential example of human induced evolution in any natural system of your choice. You will then create a scientific poster presenting your analysis of the evidence for whether or not human activities may be driving trait evolution in a natural population. Your goal is to find and evaluate data to test the general hypothesis that humans are a source of selection (intentionally or unintentionally) that may/may not drive the evolution of specified traits (targets of selection) in any natural population. Focus on addressing the following questions:
  - What evidence is there that human activities are a source of selection?
  - What is the likely strength of selection?
  - What are the phenotypic targets (traits) of selection?
  - What is the evidence that phenotypic change has occurred in the population?
  - What is the evidence that any observed phenotypic change is evolutionary?

- Then try to identify and discuss any key uncertainties related to these questions,
and how these uncertainties might be assessed in a future study.

- Include a **minimum** of six peer-reviewed scientific articles relevant to your project.
- Poster design will be discussed in lecture and materials will be provided on CourseLink. Other useful information about poster design can be found here: https://www.uoguelph.ca/ib/academic-resources
- This poster assignment has an additional **pre-submission peer-review process** of the first draft where you will be evaluated by three of your peers. 5% of your grade will be based on these peer reviews. You will also evaluate and provide feedback on randomly assigned draft versions of posters from three other students. Your review of these posters will be evaluated for an additional 5% by an instructor (ie., we will evaluate your reviews). There are two benefits to peer review: To give and get feedback that improves your final poster, and to see different ways to craft posters. First and final poster drafts will be submitted through PEAR, and the final poster version will be evaluated by instructors.

6.5 Final Exam

This is cumulative for the whole term and usually involves some multiple choice, short and longer answer questions. Note that short answer questions are often drawn from the assigned readings!

7 Course Statements

7.1 Class Atmosphere

- The success of this course depends on mutual respect among students and instructors. It also depends on the participation of the instructors and students. Please bring your enthusiasm with you to class!
- The value of criticism during the peer reviews is to provide useful feedback that helps the person improve their understanding or product, so please focus your critiques on the understandings or products and never on the person.
- We wish to support all students whether or not registered through Student Accessibility Services (SAS). Please be aware that the SAS does NOT contact faculty about your presence in any course. Please reach out to your instructors in order for us to help you succeed.
- Academic misconduct or personal harassment will not be tolerated and will be subject to University disciplinary procedures.
• If you are a SAS registered student that requires accommodation - PLEASE contact me so that we can discuss how I can help you succeed.

7.2 Grading

• All assignments are due in class by the end of the period unless consideration is agreed to in advance of the deadline by the instructor. Late penalty is 10% per each additional 24 hr period starting at 12:01 AM, including weekends.
• One exception to this rule is for the submission of draft posters and reviews of posters, where No late draft posters or reviews will be accepted in order to keep to schedule.
• Technology in the classroom: Feel free to bring your laptop to lectures, but only use it in a manner that will not disturb those around you. Please do not use your laptop for anything other than activities related to this biochemistry course. Turn your cell phones off, or put them on silent, and do not text-message during class.

7.3 When You Cannot Meet a Course Requirement

Consideration may be granted at the instructor’s discretion. Please note that consideration for medical, compassionate or university-related conflicts (e.g., varsity sports) may require additional discussion with your program counsellor. Consideration is more likely when the student proactively advises the instructor of issues well in advance of deadlines.

8 Department of Integrative Biology Statements

8.1 Academic Advisors

If you are concerned about any aspect of your academic program:

• Make an appointment with a program counsellor in your degree program. B.Sc. Academic Advising or Program Counsellors

8.2 Academic Support

If you are struggling to succeed academically:

• Learning Commons: There are numerous academic resources offered by the Learning Commons including, Supported Learning Groups for a variety of
courses, workshops related to time management, taking multiple choice exams, and general study skills. You can also set up individualized appointments with a learning specialist. [http://www.learningcommons.uoguelph.ca](http://www.learningcommons.uoguelph.ca)

- Science Commons: Located in the library, the Science Commons provides support for physics, mathematic/statistics, and chemistry. Details on their hours of operations can be found at: [http://www.lib.uoguelph.ca/get-assistance/studying/chemistry-physics-help](http://www.lib.uoguelph.ca/get-assistance/studying/chemistry-physics-help) and [http://www.lib.uoguelph.ca/get-assistance/studying/math-stats-help](http://www.lib.uoguelph.ca/get-assistance/studying/math-stats-help)

### 8.3 Wellness

If you are struggling with personal or health issues:

- Counselling services offers individualized appointments to help students work through personal struggles that may be impacting their academic performance. [https://www.uoguelph.ca/counselling/](https://www.uoguelph.ca/counselling/)
- Student Health Services is located on campus and is available to provide medical attention. [https://www.uoguelph.ca/studenthealthservices/clinic](https://www.uoguelph.ca/studenthealthservices/clinic)
- For support related to stress and anxiety, besides Health Services and Counselling Services, Kathy Somers runs training workshops and one-on-one sessions related to stress management and high performance situations. [http://www.uoguelph.ca/~ksomers/](http://www.uoguelph.ca/~ksomers/)

### 9 University Statements

#### 9.1 Email Communication

As per university regulations, all students are required to check their e-mail account regularly: e-mail is the official route of communication between the University and its students.

#### 9.2 When You Cannot Meet a Course Requirement

When you find yourself unable to meet an in-course requirement because of illness or compassionate reasons please advise the course instructor (or designated person, such as a teaching assistant) in writing, with your name, id#, and e-mail contact. The regulations and procedures for [Academic Consideration](#) are detailed in the Undergraduate Calendar.

#### 9.3 Drop Date

Courses that are one semester long must be dropped by the end of the fortieth class day; two-semester courses must be dropped by the last day of the add period in the second semester. The regulations and procedures for [Dropping Courses](#) are available in the Undergraduate Calendar.
9.4 Copies of Out-of-class Assignments

Keep paper and/or other reliable back-up copies of all out-of-class assignments: you may be asked to resubmit work at any time.

9.5 Accessibility

The University promotes the full participation of students who experience disabilities in their academic programs. To that end, the provision of academic accommodation is a shared responsibility between the University and the student.

When accommodations are needed, the student is required to first register with Student Accessibility Services (SAS). Documentation to substantiate the existence of a disability is required, however, interim accommodations may be possible while that process is underway.

Accommodations are available for both permanent and temporary disabilities. It should be noted that common illnesses such as a cold or the flu do not constitute a disability.

Use of the SAS Exam Centre requires students to book their exams at least 7 days in advance, and not later than the 40th Class Day.

More information: www.uoguelph.ca/sas

9.6 Academic Misconduct

The University of Guelph is committed to upholding the highest standards of academic integrity and it is the responsibility of all members of the University community – faculty, staff, and students – to be aware of what constitutes academic misconduct and to do as much as possible to prevent academic offences from occurring. University of Guelph students have the responsibility of abiding by the University’s policy on academic misconduct regardless of their location of study; faculty, staff and students have the responsibility of supporting an environment that discourages misconduct. Students need to remain aware that instructors have access to and the right to use electronic and other means of detection.

Please note: Whether or not a student intended to commit academic misconduct is not relevant for a finding of guilt. Hurried or careless submission of assignments does not excuse students from responsibility for verifying the academic integrity of their work before submitting it. Students who are in any doubt as to whether an action on their part could be construed as an academic offence should consult with a faculty member or faculty advisor.

The Academic Misconduct Policy is detailed in the Undergraduate Calendar.

9.7 Recording of Materials

Presentations which are made in relation to course work—including lectures—cannot be recorded or copied without the permission of the presenter, whether the instructor, a classmate or guest lecturer. Material recorded with permission is restricted to use for that course unless further permission is granted.

9.8 Resources
The Academic Calendars are the source of information about the University of Guelph's procedures, policies and regulations which apply to undergraduate, graduate and diploma programs.
