DR. SAMUEL WORKENHE

Assistant Professor,
Department of Pathobiology,
Ontario Veterinary College,
University of Guelph

**TOPIC: The immune system's role as a coroner of
dying cancer cells**

Sam Workenhe is a veterinarian and cancer researcher investigating how dying cells regulate immunity. Sam started his lab at the University of Guelph in 2020. Prior to that Sam was a postdoctoral fellow at McMaster University where he studied the therapeutic uses of activating desirable cancer cell death. When not doing science, rain or shine, Sam loves biking, running, and hiking.

Sam is also looking for highly motivated graduate students to join his lab.
