

**Department of Marketing and Consumer Studies**  
**MCS\*6070**  
**Structural Equation Modelling (SEM)**  
**Winter 2017**

---

**Instructor(s):** Dr. Towhidul Islam, Professor  
Room: MINS 206, Ext 53835  
Email: [islam@uoguelph.ca](mailto:islam@uoguelph.ca)  
Office Hours: Mondays 12:30 – 1:30 pm, 4:00 – 6:00 pm  
Wednesdays 1:30 – 3:30 pm

**Class Times and Location:** **Lecture:** Tuesdays MINS 207: 9:30 -12:30 pm  
**Lab:** Additional Lab support on Mondays in MACS 243: 2:45 – 3:45 pm

### **COURSE DESCRIPTION**

This course is designed for those students (or any researchers) who want to gain a significant familiarity with a collection of statistical techniques that target the measurement of latent variables (i.e. variables that cannot be measured directly) as well as methods for estimating relationships among variables within causal systems. This course covers exploratory and confirmatory factor analysis, latent class and finite mixture models, latent growth curve and introduction to multi-level model. The course also covers counterfactual approach of causal inference in the presence of confounders, mediators and moderators. Data analysis examples will come from business and social science applications and practical implementation of all methods will be demonstrated using the Mplus software.

### **COURSE LEARNING OBJECTIVES**

Students who successfully complete this course will be able to:

- Understand the latent variable measurement problems
- Be able to implement factor analysis models using software on real data and interpret results including checking model assumptions
- Understand the use of latent class and finite mixture models as methods for clustering individuals and be able to fully implement them using software including assessing model fit and interpreting results
- Understand the role of structural equation modeling (SEM) including making causal inference using counterfactual approach in the presence of confounders, mediators and moderators.
- Identify and be able to estimate using software the total, indirect, and direct effects within a SEM as well as assessing model fit and checking model assumptions.
- Critically read research articles that use the collection of methods learned in the course.

### **Course Materials and Resources:**

This course uses a variety of materials and resources. One of your primary resources will be the course website (<http://courselink.uoguelph.ca>). All announcements, required and recommended readings, assignments and updates will be posted here. You will also be able to access any handouts you may have missed through this site.

### **Course Structure**

Classroom experience will be a combination of traditional lecture with notes made available electronically before class and hands-on computer lab experience (using the free demo version of Mplus) in a designated computer lab or in class with laptops. Homework will be assigned approximately every two weeks and students may discuss their work with other class-mates but are expected to write-up results themselves.

## Suggested Texts for Reading Selected Chapters

- Kline, R.B. (2015). Principles and Practice of Structural Equation Modeling, 4<sup>th</sup> Edition, Guilford.
- Muthen, B., Muthen, L. and Asparouhov, T. (2016). Regression and Mediation Analysis using Mplus. Los Angeles, CA. Muthen & Muthen.
- Grimm, K. J., Ram, N. and Estabrook, R. (2017). Growth Modeling: Structural Equation and Multilevel Modeling Approaches. Guilford Press. New York.
- Bollen, K. A. and Curran, P. J. (2006). Latent Curve Models: A Structural Equation Perspective. Wiley, New Jersey.
- Heck, R. H. and Thomas, S. L. (2015). An Introduction to Multilevel Modeling Techniques: MLM and SEM Approaches using Mplus, 3<sup>rd</sup> Edition, Routledge, New York.

## Software: MPLUS

You will need access to a computer. I will be introducing how to implement all the techniques in the course using the **Mplus software** ([www.statmodel.com](http://www.statmodel.com)). A FREE demo version of MPLUS 7.4 software and **Mplus user guide** ([www.statmodel.com](http://www.statmodel.com)) are available for download from the Mplus website. Some very good resources (including full video lectures by the creator of Mplus, Bengt Muthen) are available on Mplus website. PDF version of Mplus software manual is available free to download from Mplus website.

## Group Final Project:

The project will entail a substantive description and detailed statistical analysis of some data set in which the analysis utilizes any one of the following statistical modeling techniques learned in class.

- Option 1: Multilevel Latent Growth modeling
- Option 2: Multilevel Latent Class Model
- Option 3: Multilevel Mediation Analysis
- Option 4: Multilevel CFA
- Option 5: Latent Class and Latent Transition Analysis (LTA)

Depending on the size of the class groups for final projects will be of size 2 or 3 and will be formed by self-selection. For all projects, a written report (10-12 pages not including graphs) outlining the problem, describing the analysis and summarizing the results will be required. For Ph.D. students target will be to generate a manuscript for submission.

## Evaluation Procedure:

|                                    | <b>Modules</b>                                              | <b>Weight</b> |
|------------------------------------|-------------------------------------------------------------|---------------|
| <b>Assignments:<br/>Individual</b> | Latent Variable Measurement, CFA and Measurement Invariance | 20%           |
|                                    | Mediation and Moderation using Counterfactual Approach      | 20%           |
|                                    | Latent Growth Mixture Models                                | 20%           |
| <b>Group</b>                       | Final Project                                               | 40%           |

For each assignment, you will get at least 7 day time for submission from the assignment handover date. Extensions will only be granted on the basis of extenuating circumstances.

Class Schedule and Suggested Readings:

| Week and Module (and Labs)                                                                                                                                                                                                                                        | Lecture Topics & Readings                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

## University Grading Scheme

This course follows the University grading scheme outlined in the University Calendar\*:

|    |         |                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|----|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| A+ | 90-100% | <b>Excellent:</b> An outstanding performance in which the student demonstrates a superior grasp of the subject matter, and an ability to go beyond the given material in a critical and constructive manner. The student demonstrates a high degree of creative and/or logical thinking, a superior ability to organize, to analyze, and to integrate ideas, and a thorough familiarity with the appropriate literature and techniques. |
| A  | 85-89   |                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| A- | 80-84   |                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| B+ | 77-79   | <b>Good:</b> A more than adequate performance in which the student demonstrates a thorough grasp of the subject matter, and an ability to organize and examine the material in a critical and constructive manner. The student demonstrates a good understanding of the relevant issues and a familiarity with the appropriate literature and techniques.                                                                               |
| B  | 73-76   |                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| B- | 70-72   |                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| C+ | 67-69   | <b>Acceptable:</b> An adequate performance in which the student demonstrates a generally adequate grasp of the subject matter and a moderate ability to examine the material in a critical and constructive manner. The student displays an adequate understanding of the relevant issues, and a general familiarity with the appropriate literature and techniques.                                                                    |
| C  | 65-66   |                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| F  | 0-64    | <b>Fail:</b> An inadequate performance.                                                                                                                                                                                                                                                                                                                                                                                                 |
