## FOREWORD

The following table is a listing of the tachinid genera of the world with their regional occurrence. It was compiled from the generic names and distributions given in the most recent regional catalogues, as listed here, and brought up-to-date using information from subsequently published papers.

### Regional catalogues

Nearctic Region	O'Hara & Wood (2004)
Neotropical Region	Guimarães (1971)
Palearctic Region	Herting & Dely-Draskovits (1993)
Afrotropical Region	Crosskey (1980)
Oriental Region	Crosskey (1976, 1977)
Australasian Region	Cantrell & Crosskey (1989)

All names that appear as valid genera in the regional catalogues are included in the table below. A name that is now a synonym of another genus is shown in light brown and a reference to the synonymy (usually the original source of the synonymy but rarely a later listing) is given. Publications cited in this manner are listed after the table in the References section. Synonyms are denoted with an “x” in the table to indicate the catalogue in which the name occurred. New records for regional distributions are also referenced. Some tachinid names that are treated as valid in this list and in the literature are preoccupied by older names from outside the Tachinidae (F.C. Thompson, pers. comm.). These preoccupied names are not indicated as such here to avoid the opportunistic publication of replacement names (although this is already happening, see Özdkmen 2006). There is one preoccupied name listed here that is preoccupied by another tachinid name: *Pseudodexia* Chao (2002) is preoccupied by *Pseudodexia* Brauer and Bergenstamm (1891).

Currently recognized genera are coded with a “1” for regions in which they occur. The sum of each column is given in the summary table on the next page and at the end of the table of genera; these sums represent the number of valid genera recognized in each region. For the purposes of this document, the boundary between the Nearctic and Neotropical regions is taken as the United States/ Mexico border to correspond with the geographic coverage of the catalogues by Guimarães (1971) and O’Hara and Wood (2004). The true boundary between these regions is in southern Mexico (Griffiths 1980).

---

Title page image: Male of *Trixodes obesus* Coquillett, in characteristic pose facing downward on the trunk of a large sunlit tree at about head height. Picture by author, Cherry Creek campground, 22 kilometers north of Silver City, New Mexico, USA (32°54.8'N 108°13.6'W), 15 August 1999. Fly length = 19 mm.

An asterisk (\*) preceding a generic name denotes a genus described after publication of the corresponding regional catalogue(s). Papers containing these generic names are cited in the References.

This second version of the World Genera of the Tachinidae replaces Version 1 that was dated 23 February 2005 and published on the Internet on that date. Version 2 includes some corrections to the first version and new information published since Version 1.

### BIOGEOGRAPHIC SUMMARY

The following table provides a summary of the number of tachinid species and genera per biogeographic region along with the number and percent of genera endemic to each region.

Number	World	Neotropical <sup>1</sup>	Nearctic <sup>1</sup>	Palearctic	Afrotropical	Oriental	Australasian <sup>2</sup>
Species	9899 <sup>3</sup>	2864 <sup>4</sup>	1345 <sup>5</sup>	>1600 <sup>6</sup>	1006 <sup>7</sup>	725 <sup>8</sup>	808 <sup>9</sup>
Genera	1523	822	304	405	213	264	230
Endemic genera	1123 <sup>10</sup>	643	61	149	93	52	125
% Endemic genera	—	78%	20%	37%	44%	20%	54%

<sup>1</sup> The boundary between the Nearctic and Neotropical regions is taken as the United States/ Mexico border to correspond with the geographic coverage of the catalogues by Guimarães (1971) and O'Hara and Wood (2004).

<sup>2</sup> Australasian and Oceanian regions.

<sup>3</sup> Irwin et al (2003).

<sup>4</sup> Guimarães (1971).

<sup>5</sup> O'Hara & Wood (2004).

<sup>6</sup> Tschorsnig & Richter (1998).

<sup>7</sup> Irwin et al. (2003).

<sup>8</sup> Crosskey (1976).

<sup>9</sup> Cantrell & Crosskey (1989).

<sup>10</sup> Total number of genera found in only one region.

There are nearly 10,000 described species of Tachinidae in the world (Irwin et al. 2003), but the actual size of the family is much larger because the Neotropical, Afrotropical, Oriental and Australasian regions contain large numbers of undescribed species. The number of tachinid genera recognized on a world basis is currently 1528, as enumerated here. This number may possibly fluctuate both up and down in the coming decades as over-split genera are combined into larger and more meaningful genera, and new genera are described to accommodate the many new species that await description.

Radiation of the Tachinidae is thought to have taken place during the Cenozoic Era after the breakup of Gondwanaland. Hence, there was not an opportunity for the dispersal of ancient tachinid lineages between the southern continents of South America, Africa and Australia. This is possibly reflected in the present-day pattern of generic endemism. The biogeographic regions with the lowest number of endemic genera are the Nearctic and Oriental regions, which functioned in part as corridors for the movement of species between regions during the Tertiary and Quaternary periods. The Palearctic Region also served as a dispersal route between the Nearctic, Afrotropical and Oriental regions, but its huge size and diverse physiography and climate permitted the development of a sizable endemic fauna at both the generic and species levels. The highest levels of generic endemism are found in the Neotropical, Afrotropical and Australasian regions, which functioned as cul-de-sac's during the Cenozoic and were therefore ideally suited for the evolution of endemic faunas. However, the 78% generic endemism in the Neotropical Region is due in part to the over-split nature of the genera.

## ACKNOWLEDGEMENTS

I am grateful for the assistance of the following people during the preparation of this document: D.M. Wood, J.M. Cumming and B.E. Cooper (Invertebrate Biodiversity, Agriculture and Agri-Food Canada, Ottawa, Canada), V.A. Richter (Zoological Institute, Russian Academy of Sciences, St. Petersburg, Russia), C.-t. Zhang (Institute of Entomology, Sun Yat-sen University, Haizhu District, China), H. Shima (Biosystematics Laboratory, Kyushu University, Fukuoka, Japan), and F.C. Thompson (Systematic Entomology Laboratory, United States Department of Agriculture, Washington, USA). A few errors in Version 1 of this document are corrected in Version 2 as a result of helpful comments by H-P. Tschorasnig (Staatliches Museum für Naturkunde, Stuttgart, Germany).

## TABLE OF GENERA AND THEIR REGIONAL OCCURRENCE

Abbreviations: Wor, World; Nea, Nearctic; Neo, Neotropical; Pal, Palearctic; Afr, Afrotropical; Ori, Oriental; Aus, Australasian.
