**TIER**  
NE TEST...

*At this year's prestigious World Dairy Expo, a technology called High Immune Response - developed at the University of Guelph by Prof. Bonnie Mallard and her team - was named one of the top innovative products of 2013. The technology, licensed by the Catalyst Centre to Canada's largest dairy genetics company, the Semex Alliance, is marketed as Immunity+. Congratulations to Bonnie and her team, and thanks to Semex and Vice-President Brad Sayles (pictured overleaf with Bonnie and the highly coveted award) for making Immunity+ available to improve the health of cattle worldwide.*
