

Volunteers needed for a research study on the effects of climate change on mental health

If you are between the ages of 16-24, live in Toronto or urban GTA, identify as a visible minority, and are not currently involved in climate change-related work, education, or volunteering, I would like to hear your views on the mental health effects of climate change.

Participants are required to take 5-8 photographs that represent your experiences with and feelings about climate change and take part in a 1 hour in-person or online interview.

To find out more or to participate, please email

for research involving human participants.
